- This Quick Start Guide

**Warning**
- DO NOT use this router in high humidity or high temperatures.
- DO NOT use the same power source for this router as other equipment.
- DO NOT open or repair the case yourself. If this router is too hot, turn off the power immediately and have it repaired at a qualified service center.
- Avoid using this product and all accessories outdoors.

**Attention**
- Place this router on a stable surface.
- Only use the power adapter that comes with the package. Using a different voltage rating power adaptor may damage the router.

| 3    | RESET    | After the device is powered on, press it to reset the device or restore to factory default settings. 
0-3 seconds: reset the device 
6 seconds above: restore to factory default settings (this is used when you cannot login to the router. E.g.: forgot the password) |
| 4    | HPNA     | Connect to HPNA device or ADSL/telephone network(if ADSL port and Phone port are connected.) |
| 5    | Phone    | Connect to phone or ADSL splitter or ADSL port |
| 6    | LAN 1X — 4X (RJ-45 connector) | Connect a UTP Ethernet cable (Cat-5 or Cat-5e) to one of the four LAN ports when connecting to a PC or an office/home network of 10Mbps or 100Mbps. |
| 7    | ADSL     | Connect the supplied RJ-11 (“telephone”) cable to this port when connecting to the ADSL/telephone network or to “Phone” port of the gateway. |
Connecting Your ADSL Router

1. Connect the Router to an HPNA, LAN (Local Area Network) and the ADSL/telephone (ADSL) network.

With ADSL Splitter (Recommended)

Without ADSL Splitter
2. Power on the device.

3. Make sure the PWR, SYS, and WLAN LEDs are lit steadily and that the relevant HomePNA, LAN LED are lit.
Quick Start Guide

Configuring PC in Windows XP

1. Go to Start / Control Panel (in Classic View). In the Control Panel, double-click on Network Connections.

2. Double-click Local Area Connection.

3. In the Local Area Connection Status window, click Properties.

4. Select Internet Protocol (TCP/IP) and click Properties.
5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** radio buttons.

6. Click **OK** to finish the configuration.
Configuring PC in Windows 2000

1. Go to Start / Settings / Control Panel. In the Control Panel, double-click on Network and Dial-up Connections.

2. Double-click Local Area Connection.

3. In the Local Area Connection Status window click Properties.

4. Select Internet Protocol (TCP/IP) and click Properties.
5. Select the **Obtain an IP address automatically** and the **Obtain DNS server address automatically** radio buttons.

6. Click **OK** to finish the configuration.
Configuring PC in Windows 98/Me

1. Go to Start / Settings / Control Panel. In the Control Panel, double-click on Network and choose the Configuration tab.

2. Select TCP/IP -> NE2000 Compatible, or the name of your Network Interface Card (NIC) in your PC.

3. Select the Obtain an IP address automatically radio button.

4. Then select the DNS Configuration tab.

5. Select the Disable DNS radio button and click OK to finish the configuration.
Configuring PC in Windows NT4.0

1. Go to Start / Settings / Control Panel. In the Control Panel, double-click on Network and choose the Protocols tab.

3. Select the Obtain an IP address from a DHCP server radio button and click OK.
Configuring Your ADSL VPN Firewall Router

\[ \text{To configure this device, you must have IE 5.0 / Netscape 4.5 or above installed} \]

### Connecting to the Router

1. Open the web browser and type `http://192.168.1.254` in the browser’s address box. This number is the default IP address for this router. Press Enter.

2. A user name and password window will appear. The default User Name and Password are “admin” and “admin”. Press OK to logon to the router.
Verifying Your Local Network Connection with the Device

To see if this ADSL Router is visible on the local network, go to Start / Run. In the Run dialog box, type “ping 192.168.1.254” then press OK.

A command prompt window will pop out. If your ping is successful which means your local network is able to reach to the device, then the command prompt window will close up automatically.

Connection fails, when you see “Request timed out” in the command prompt window. You may need to check your set up.
Product Support and Contact Information

Referring to the Troubleshooting section in the User's Manual can solve most problems. If you cannot resolve the problem with the Troubleshooting chapter, please contact the dealer where you purchased this product.
